

KRISH JETHVA

Frontend Developer | React.js | MERN Stack

Mumbai | krishjethva54@gmail.com | 7208720647 | github.com/krishj30

PROFILE

Frontend developer with real-world client delivery, 3 deployed projects, and full-stack academic experience. Builds responsive, component-based UIs in React.js with API integration and state management. Comfortable across the full frontend stack — React, Tailwind, JavaScript, REST APIs. Open to frontend roles and MERN stack internships.

EXPERIENCE

Frontend Developer · *Social Fast Tag — Freelance Client Project* 2024

- Delivered a fully responsive, mobile-first website for a real paying client using HTML5, CSS3, JavaScript, and Bootstrap — shipped on time after multiple feedback iterations.
- Translated client requirements into a structured, reusable component layout with consistent navigation across all screen sizes.
- Achieved cross-browser compatibility across Chrome, Firefox, Safari, and Edge with zero layout-breaking bugs reported post-delivery.

Full-Stack Developer · *Wellness Wave — Mental Wellness Platform* 2024 – 2025

- Engineered the complete React.js frontend using component-based architecture — dynamic assessment forms, real-time scoring, and result interpretation pages.
- Built a Python Flask REST API backend handling prediction logic and JSON data exchange across 4+ endpoints between client and server.
- Delivered the full project — frontend + backend + API integration — as a 2-person team within the academic semester deadline.

PROJECTS

Product Store Dashboard — *React.js · Tailwind CSS · Vite · REST API · localStorage* [Live](#) | [GitHub](#)

- Built a full CRUD e-commerce dashboard: fetch products from FakeStore API, add/delete items, search and sort by price — all using React useState and useEffect.
- Implemented a sliding cart sidebar with quantity management, real-time total calculation via reduce(), and cart persistence using localStorage across page refreshes.
- Integrated react-hot-toast for user feedback notifications and deployed on Vercel — live and publicly accessible.

Wellness Wave — *React.js · Python Flask · REST API · HTML/CSS/JS* [GitHub](#)

- Full-stack mental wellness platform: React frontend with dynamic assessment forms and a Flask REST API backend that scores responses and returns result interpretations.
- Designed responsive multi-page UI with component-based architecture; handled full data flow from user input through API to result display.

Social Fast Tag — *HTML5 · CSS3 · JavaScript · Bootstrap* [GitHub](#)

- Freelance client project: designed and delivered a production-grade website from requirements to deployment — mobile-first, cross-browser compatible.

SKILLS

Frontend	React.js, JavaScript (ES6+), HTML5, CSS3, SCSS, Tailwind CSS, Bootstrap
Concepts	Component architecture, state management, REST API integration, CRUD, localStorage
Tools	Git, GitHub, Vite, npm, VS Code, Vercel
Backend	Python Flask, REST API design, JSON data handling
Learning	Node.js, Express.js, MongoDB — building toward full MERN stack

EDUCATION

M.Sc. Information Technology 2025 – Present

Somaiya College, Mumbai

B.Sc. Information Technology 2022 – 2025

Malini Kishor Shanghvi College, Mumbai
